Education

Holy Angel University — Angeles City, Pampanga
Bachelor of Science in Computer Science — *2023-2027*
Dean's Lister **6×**; President's Lister **1×**

Experience

ISU-PAGASA Agrometeorological and Radar Station — Echague, Isabela
Intern — *Mar 2023 – May 2023*

- Monitored and recorded meteorological parameters at **3-hour** intervals, including precipitation, temperature, humidity, and atmospheric pressure from station instruments and radar systems daily.
- Prepared daily meteorological reports over a **12 week** period, consolidating weather observations into structured summaries for station monitoring and archival documentation.
- Maintained and updated internal observational databases, validating **200+ records** for accuracy, completeness, and consistency across daily station logs.

Projects

Chami | Flutter, Dart, TensorFlow Lite, SQLite, Supabase, MobileNetV4
Fruit ripeness classification app · Undergraduate thesis

- Co-developed an offline-first Android app classifying **3 fruit varieties** using MobileNetV4, with on-device inference and shelf-life guidance.
- Led end-to-end data preparation and model training, cleaning and augmenting **1,725 images**, achieving **97.67% F1-score** and **97.81% precision** on test data.
- Conducted **50+** public usability tests and collaborated with **5 software and AI experts** to evaluate application usability, functionality, and technical quality, incorporating feedback to validate the system.
- Implemented scan history, batch tracking, SQLite storage, and Supabase synchronization, achieving a **100%** pass rate across **18 functional tests**.

AlfaFocus | React, JavaScript, Tailwind CSS, Express, PostgreSQL
Full-stack productivity web app

- Developed a full-stack productivity website integrating task management, nested projects, calendar planning, and habit tracking into a unified dashboard.
- Engineered a drift-free timer hook supporting **3** focus modes, with automatic session logging and interactive productivity heat maps.
- Developed an Express REST API with **17 endpoints** backed by PostgreSQL, implementing JWT authentication, user-specific workspaces, and persistent task management.

OnlyFunds | Flutter, Dart, Firebase Authentication, Cloud Firestore
Mobile budget and expense tracker

- Developed an Android budgeting application with income and expense tracking, savings goals, and linear regression-based forecasting, analyzing up to **6 months** of transaction history to generate financial insights.
- Integrated Firebase Authentication and Cloud Firestore with real-time data synchronization to display account balances, monthly totals, and transaction histories.

Technical Skills

Languages: Python, Java, JavaScript, Dart, SQL, HTML, CSS
Frameworks and Libraries: Flutter, React, Node.js, Express, TensorFlow, PyTorch
Tools: Amazon AWS**,** PostgreSQL, Supabase, Firebase, Git, GitHub, Render, Vercel, Linux (CLI), Figma
AI-Assisted Development: OpenAI Codex, Google Antigravity

Certifications

Data Analytics Essentials | Cisco	Apr 2026
CCNA: Introduction to Networks | Cisco	Apr 2026
AWS Academy Graduate – Cloud Foundations | AWS	Mar 2026
Cyber Threat Management | Cisco	Dec 2025
Endpoint Security | Cisco	Aug 2025
Relational Database V8 | freeCodeCamp	Feb 2025
JavaScript Essentials 1 | Cisco	Oct 2024
Legacy Responsive Web Design V8 | freeCodeCamp	Sep 2024
CompTIA IT Fundamentals+ (ITF+) | CompTIA	Nov 2023
Python Essentials 1 | Cisco	Sep 2023
